

Getting started

Just as with humans, the advice for dosing and how to start your pet with CBD is the same. Finding the right dose is a process and as all pets are different, and have different needs - one size does not fit all.

With CBD research in its infancy, a universal dosing recommendation has not yet been issued. We advise the same for humans - start low and go slow.

The best way to find the right serving size for them is to work your way up from the lowest recommended dose for your pet's weight and monitor their behavior.

We recommend keeping notes on how the CBD serving size affects your pet – this practice will help you remember accurately which serving size showed the most benefits.

If you feel your pet would benefit from a higher serving size of CBD, research suggests increasing your serving every 3-4 weeks to fully process how the current serving size is affecting your pet.

How to give CBD to your pet

For your pet to get the best bioavailability of the CBD we suggest you put drops in their lower gum line between lip and teeth - your pet will absorb the CBD faster and most effectively.

You can also drop the CBD on a small spoonful of peanut butter and have your pet lick it off.

If you are struggling to administer it directly, as a last resort drop over your pet's feed.

DAILY DROPS

Our organic, DAILY DROPS have 300mg of CBD in each 15ml bottle. A full dropper holds 0.5ml which is 10mg and dispenses 0.05 mg per drop. By law our packaging states our product has 0.3% THC but our lab reports* show no detectable trace.

*see website for lab report

Dose Chart

We have created a guide to help you successfully integrate CBD into your pets diet.

Check the suggested dose in the chart based on your pets weight and their symptoms. For general health we encourage the low dose (mild) once a day. If your pet is requiring more assistance we would suggest starting and the moderate or severe dose and work from there.

We propose a three-week integration plan whereby you start low and build up week by week.

Pet weight (lbs)	Mild (lbs)	Moderate	Severe
10	1mg	2mg	3mg
20	2mg	4mg	6mg
30	3mg	6mg	9mg
40	4mg	8mg	12mg
50	5mg	10mg	15mg
60	6mg	12mg	18mg
70	7mg	14mg	21mg
80	8mg	16mg	24mg
90	9mg	18mg	27mg
100	10mg	20mg	30mg
110	11mg	22mg	33mg
120	12mg	24mg	36mg
130	13mg	26mg	39mg
140	14mg	28mg	42mg
150	15mg	30mg	45mg
160	16mg	32mg	48mg

With all changes to your pets diet we recommend consulting your vet before starting them on CBD.
